## Burnett's Lawn Grass Seed Mixtures

TESTED and PROVEN

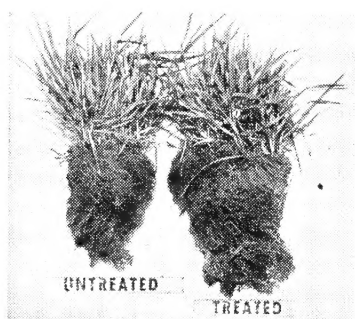

MAXIMUM FREEDOM FROM WEEDS

HIGH GERMINATION and PURITY

*The Satisfaction of a Perfect Lawn*

A fine lawn is obtained by the careful and exact fulfillment of three fundamental requirements. Preparation of the seed bed, the use of good grass seed and the proper maintenance of the turf once established. These three factors are of equal importance, and failure to meet the requirements of any of these will make the efforts expended on the other two of little avail. **Burnett Bros. Inc.**, with a reputation of supplying grass seeds of the highest quality for a period of over 40 years, assume the responsibility of furnishing good seed.

**HORMONE-TREATED  
LAWN GRASS SEED**

Plants from Hormone-Treated Grass Seed have nearly three times the root strength of plants from untreated seed

Outstanding among the scientific discoveries of recent years. Extensive experiments have shown that the Hormone Treatment of Grass Seeds will result in quicker germination and a marked increase in root growth.

The production of this strong, extra vigorous root system (see illustration above) is of vital importance in making a new lawn or renovating an old lawn. The extra stimulant derived from Hormone Treatment is of particular value for late seedings, or where it is necessary to produce an established turf in a relatively short time.

**HORMONE-TREATED** available in all mixtures at **5c. per lb.** additional to listed prices.

If the ground is properly prepared, we are certain "**Killarney Mixture**" will produce a turf of velvet.

## PERMANENT TURF

**Our very finest all-purpose formula that will produce the most permanent lawn possible. In sun or shade—good or poor soil. Prepared especially for Chinch Bug infested areas**

Many beautiful lawns throughout certain areas of the eastern coast of the United States and elsewhere have been completely destroyed as a result of the extensive ravages of a recent lawn pest, the Chinch Bug. This bug is of the sucking insect type and does its damage to lawns by piercing the grass blades and shoots near the soil level and sucking out the juices of the grass.

Certain grasses have been found to be highly resistant to the attacks of this insect and it is a careful blending of these grasses that make up our "Permanent Turf."

**Permanent Turf (no Clover).** 2½ lbs. \$3.15, 5 lbs. \$6.00, 12½ lbs. \$14.50, 25 lbs. \$28.00, 50 lbs. \$54.00.

**Permanent Turf (with White Dutch Clover).** 2½ lbs. \$3.40, 5 lbs. \$6.50, 12½ lbs. \$15.50, 25 lbs. \$30.00, 50 lbs. \$58.00

**Permanent Turf (with Kentish Wild White Clover).** 2½ lbs. \$3.55, 5 lbs. \$6.75, 12½ lbs. \$16.00, 25 lbs. \$31.00, 50 lbs. \$60.00.

## SEASHORE FORMULA

This mixture is composed of grasses most suitable for areas near the ocean. Will give good results in all sandy soils. Deep rooting grasses that are not injured by salt water.

2½ lbs. \$2.30, 5 lbs. \$4.50, 12½ lbs. \$11.00, 25 lbs. \$21.00, 50 lbs. \$40.00.

## "BANK AND TERRACE" LAWN MIXTURE

The Terrace mixture which we offer is composed of deep-rooting grasses which, if once established, will hold the soil and prevent washing. We advise liberal fertilization and seeding so that the grasses may be quickly established. 2½ lbs. \$2.90, 5 lbs. \$5.70, 12½ lbs. \$13.50, 25 lbs. \$26.00, 50 lbs. \$50.00.

### QUANTITY OF GRASS SEED TO USE

For all general purposes, 1 lb. will sow 150 to 200 sq. ft.; 150 to 200 lbs. per acre. Use one-half these quantities when renovating an old lawn. **Consult Us About Your Lawn Problems—We Are At Your Service**

## Burnett's SHADY PLACE MIXTURE

When a lawn is much shaded, either in whole or in part, the shaded portions should be sown with Burnett's "Shady Place" Lawn Grass Mixture, which is a combination of fine, dwarf-growing evergreen varieties, which, in their wild or natural state, are to be found growing in the woods or other sheltered or shady places. Under or in the immediate neighborhood of large trees fertilizers should be applied liberally and frequently, for the trees absorb the fertilizer and impoverish the ground. Ground much shaded is very frequently sour, and if the drainage is defective it is apt to be covered with moss. In such cases lime raked in will sweeten the soil, but the moss should be first removed. 2½ lbs. \$3.00, 5 lbs. \$5.95, 12½ lbs. \$14.50, 25 lbs. \$28.00, 50 lbs. \$54.00.

## SOIL-SOAKER HOSE

The new "seepage irrigation" method that soaks the soil thoroughly like an "all night rain." Puts the water where you want it and where it should be—on the ground—not up in the air to be wasted and carried away by high winds. Excellent for use in gardens and lawns, and around shrubs, trees, hedges, borders, etc. Porous canvas is treated to resist mildew. Screws to faucet or water hose, replacing sprinkler, and is closed at far end. 18 ft. \$2.60, 30 ft. \$3.85, 50 ft. \$5.85 (postpaid).

## BURNETT'S BEAUTIFUL ASTERS

The introduction of a Wilt-resistant strain of Asters of recent years has helped tremendously in restoring this beautiful flower to popular favor as a garden plant. Up until the time of the origination of this resistant strain, garden enthusiasts were becoming discouraged trying to grow Asters outdoors with the wilt-disease so prevalent. The appearance of this new strain has again awakened interest in the culture of Asters.

For best results the ground cannot be too richly prepared. Plants from seed sown in the open ground in May will bloom in September and October. For July and August flowers, sow in March or April in cold frames or hotbeds. We especially recommend the following as being the best for cutting and general garden use.

One ounce will plant 50 hills

Muskmelons thrive best in a light, rich soil. Plant early in May, when the ground has become warm and dry, in hills 6 feet apart each way. The hills should be dug about 2 feet square, 18 inches deep, and half filled with rotted manure. Sow 6 to 12 seeds to a hill. When up, and all danger of insects has passed, pull out all but 3 plants. Cultivate until the vines cover the ground; pinch the ends of the growing shoots to induce early fruiting. A few hills for early use may be had by sowing the seeds out-of-doors under frames.

# STRAWBERRY PLANTS — POT-GROWN

Strawberry Plants are not difficult to grow and readily adapt themselves to a great variety of soils and climates. Pot-grown plants can be set out in the field at any time during the Spring or late Summer and early Fall months, as their strong, fibrous roots take hold quickly in new location, and can be depended upon to produce bigger crops of larger berries than field-grown layer plants.

A careful selection of varieties will insure fresh berries in the garden from early June until late Fall. This can be accomplished by choosing an **early**, a **midseason** and a **late** fruiting type as

indicated in description of varieties listed below. We recommend planting no less than 25 plants of a variety as we know from experience that growing fewer plants does not give a satisfactory picking for a small family.

**BOOK YOUR ORDER NOW.**

**SHIPPING SEASONS**—April 1st to May 15th and August 1st to October 15th.

**NOTE**—Pot-grown Strawberry Plants are shipped by **express**.

## Strawberry Culture

### PREPARATION OF SOIL

Dig bed for your plants to a depth of 14 inches and incorporate well rotted manure (not fresh manure) or decomposed leaves with the soil. Afterwards scatter Bonemeal on each bed, raking it well into the surface.

### PLANTING INSTRUCTIONS

When plants arrive, unpack at once and place in a shady spot, sprinkling them lightly with water. After hot sun has gone down in early evening, dip each root ball in a pail of water and loosen the soil with the fingers. Be careful not to knock soil from the roots. When planting, set the plants 1 foot apart in the row, spacing the rows 2 feet apart. Plants need a minimum of 6 hours sun a day so do not plant in very shaded location.

### RULES FOR SUCCESS

Most important rule is to keep weeds down by cultivating which will also loosen the soil, preserve moisture and induce healthy growth. If good, clean salt hay is available it is advisable to mulch the entire bed about the time green berries are forming, working hay well under the leaves. This practice keeps down weeds during fruiting season, keeps berries clean and free from rot and preserves soil moisture. In early Winter mulch the beds with a light covering of coarse manure, evergreen boughs, salt hay or similar material.

# New! BURNETT'S PERENNIALS *Versatile!*

## OUR OWN OUTSTANDING INTRODUCTIONS and SELECTED FAVORITES

Our perennial plants are all strong, field-grown or potted stock. They are **vigorous, young plants** that will readily establish themselves permanently in your garden. Do not buy perennial plants by size alone. Large, old clumps are never satisfactory and will soon die out when transplanted. **Plants are not sold in any quantities less than those priced.** 5 plants of anyone variety are sold at the 10 rate. Take advantage of this saving over the smaller quantities.

**Cultural Hints**—Never plant Hardy Perennials too deep, and as a rule they prefer a well-drained, loamy soil that is neutral or slightly alkaline. Poor soil should be well prepared beforehand by digging in well-rotted manure with bonemeal added if possible. When fertilizing make sure no commercial fertilizers ever come in direct contact with plant as this will burn young roots and lower foliage. Keep weeds down and soil loose around plants by frequent cultivation. **Purchaser pays transportation charges on all plants.**
